# Wireless Bamboo Round

Battery charger equipped with wireless technology with which it is possible to recharge a smartphone without connecting it via a cable but simply by placing it on the surface of the device. It uses standard Qi and functions via magnetic induction, with an energy emission equal to 5W. The real bamboo shell has a round base with a micro USB port and small lateral LEDs that shine when the battery charger is connected to an energy source (either from a socket or laptop). The surface can be personalized via silk-screen printing and laser engraving. This accessory is compatible with smartphones that are equipped with integrated Qi technology. For all other models it is possible to add to the product a universal adaptor to connect to the micro USB port (see in the category "accessories" of the configurator).

Product code  
WC005

Materials  
Bamboo.

Delivery days  
27
