Wireless Gloss

Battery charger equipped with wireless technology with which it is possible to recharge a smartphone without connecting it via a cable but simply by placing it on the surface of the device. It uses standard Qi and functions via magnetic induction, with an energy emission equal to 5W. The shell has a round base and a transparent plastic edge, upon which the micro USB port, for connecting to an energy source (either from a socket or laptop), is located. The surface can be personalized via silk-screen printing and laser engraving. This wireless charger is compatible with smartphones that are equipped with integrated Qi technology. For all other models it is possible to add to the product a universal adaptor to connect to the micro USB port (in the category "accessories" of the configurator).

Product code
WC006

Materials
Plastic.
